

# Town of Andrews

April 14, 2016

Dear Customer;

We have noticed a heavy increase in non- flushable items in our collection system. These products clog our sewer lines. They are also hard on our pumps causing extra wear and even pump failure. We are asking all Town residents to please not flush these items;

- A. Disposable wipes-Disposable wipes are disposable but most are not biodegradable. They get pulled into the pumps and cause them to clog.
- B. Sanitary products. This includes not only feminine products but also disposable wipes.
- C. Latex products of any kind.
- D. Diabetic needles or syringes
- E. Grease from cooking.
- F. Q tips

The system was not designed to remove these types of products. The system is designed to remove human waste, light paper, and materials that have gone through a garbage disposal in the kitchen. This includes sources of gray water like laundry, bathing, water softener discharge, and normal household water.

Thank you for your cooperation

Sincerely,

Andrews Town Council
